

scripts/firebase-setup.sh — User Guide

Last verified: 2026-05-15 (1.2.23 closure-cycle, §6.AD-debt task #61 backfill) **Inheritance:** HelixConstitution §11.4.18 (script documentation mandate)

Overview

Stub doc generated from the script's in-source header comment. See scripts/firebase-setup.sh for canonical behavior. This stub exists so the CM-SCRIPT-DOCS-SYNC pre-push gate (.githubhooks/pre-push Check 9) starts gating modifications to this script.

The script's own header documentation (verbatim):

scripts/firebase-setup.sh – one-time Firebase project bootstrap.

Idempotent helper that:

1. Verifies firebase-tools CLI is installed
2. Authenticates via \$LAVA_FIREBASE_TOKEN (loaded from .env, never logged)
3. Verifies the Firebase project + Android + Web apps exist
4. Re-fetches app/google-services.json (Android)
5. Re-fetches lava-api-go/firebase-web-config.json (Web)
6. Re-creates / verifies the App Distribution tester group

Usage:

```
./scripts/firebase-setup.sh           # full setup
./scripts/firebase-setup.sh --refresh # only refresh config files
./scripts/firebase-setup.sh --invite-only # only invite testers from .env
```

Constitutional bindings:

- §6.H Credential Security – token + admin key never logged or committed
- §6.J Anti-Bluff – script returns non-zero on real failures (no WARN swallow)
- §6.K Builds-Inside-Containers – operator may invoke this from a container

Usage

See the script's in-source comment block (above) for canonical usage examples.

Maintenance

When this script is modified, update this document in the same commit (CM-SCRIPT-DOCS-SYNC requires it). Per §11.4.18, the documentation **MUST** stay in sync with the codebase — no doc may be out of sync with its script.
