

scripts/bluff-hunt.sh — User Guide

Last verified: 2026-05-15 (1.2.23 closure-cycle, §6.AD-debt task #61 backfill)
Inheritance: HelixConstitution §11.4.18 (script documentation mandate)

Overview

Stub doc generated from the script's in-source header comment. See `scripts/bluff-hunt.sh` for canonical behavior. This stub exists so the CM-SCRIPT-DOCS-SYNC pre-push gate (`.github/hooks/pre-push Check 9`) starts gating modifications to this script.

The script's own header documentation (verbatim):

```
scripts/bluff-hunt.sh – Seventh Law clause 5 (Recurring Bluff Hunt).
```

```
Picks 5 random *Test.kt files, prompts the operator to apply a
deliberate
mutation to the production code each one claims to cover, runs the
test,
and asserts the test fails. If a test still passes, it is a bluff
–
the operator records it in the evidence file and either rewrites
or
removes it.
```

Usage:

```
./scripts/bluff-hunt.sh                # interactive
./scripts/bluff-hunt.sh --evidence <date> # writes evidence
file
```

This script is INTERACTIVE by design. The mutation is operator-driven;
the script frames the protocol but does not pretend to mutate the codebase autonomously (which would itself be a class of bluff).

Usage

See the script's in-source comment block (above) for canonical usage examples.

Maintenance

When this script is modified, update this document in the same commit (CM-SCRIPT-DOCS-SYNC requires it). Per §11.4.18, the documentation **MUST** stay in sync with the codebase — no doc may be out of sync with its script.
