

scripts/firebase-env.sh — User Guide

Last verified: 2026-05-15 (1.2.23 closure-cycle, §6.AD-debt task #61 backfill)
Inheritance: HelixConstitution §11.4.18 (script documentation mandate)

Overview

Stub doc generated from the script's in-source header comment. See `scripts/firebase-env.sh` for canonical behavior. This stub exists so the CM-SCRIPT-DOCS-SYNC pre-push gate (.githubhooks/pre-push Check 9) starts gating modifications to this script.

The script's own header documentation (verbatim):

```
scripts/firebase-env.sh - load Firebase config from .env
(constitutional 6.H).
```

Usage:

```
# shellcheck source=scripts/firebase-env.sh
source "$(dirname "$0")/firebase-env.sh"
```

Exits non-zero if `.env` is missing or required keys are absent.
Does NOT
echo any value (constitutional 6.H, 6.M): the values are sensitive
and
this helper is sourced into the caller's environment, never
logged.

Usage

See the script's in-source comment block (above) for canonical usage examples.

Maintenance

When this script is modified, update this document in the same commit (CM-SCRIPT-DOCS-SYNC requires it). Per §11.4.18, the documentation **MUST** stay in sync with the codebase — no doc may be out of sync with its script.
