ATM ID	Type	Status	Severity	Description
LVA-008	Bug	In progress	P1	Challenge11ArchiveOrgAnonymousSearch crashes the app PROCESS at activity-dest IllegalStateException 'State must be at le CREATED to be moved to DESTROYED' o the inner search/search_input entry. Root caused (2026-06-08): the inner nested NavController's host is the outer addNestedNavigation NavBackStackEntry driven to DESTROYED out from under the inner controller while search_input is still INITIALIZED. FALSIFIED on device: nav 2.9.1->2.9.8, LenientTeardownRule (uncatchable process death), atomic popU replace. Feature WORKS (result row rend pre-teardown). Candidate fixes ranked in incident JSON (inner NavHost Activity-sc LifecycleOwner; move search to outer NavHost; ON_STOP pop). Forensics: .lava evidence/sixth-law-incidents/2026-06-08-

ATM ID	Type	Status	Severity	Description
LVA-019	Task	Queued	—	navbackstackentry-teardown-crash-2.9.1-incomplete.json Task P1 process: coverage ledger has par gap overlap and lacks per-release ledger snapshots. Normalize the registry and add release-attestation ledgers.
LVA-079	Bug	In progress	P1	QA video 2026-06-25 (frames 0040 vs 0060125): input chip bar and results filter chip show different provider sets, and the results chip set CHANGES between two identical queries. 1076 fixed the INPUT chips (observeAll filtered+sorted) but the input RESULTS divergence + run-to-run instability is distinct and still open. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md issue #3.
LVA-081	Task	In progress	P2	Operator directive: fetch+pull+merge latest codebase from all submodules. Frozen-by-default overridden for this cycle. Must build verify after each bump; revert+report any submodule whose bump breaks the build.
LVA-082	Task	Queued	P3	Operator asked to use Firebase CLI to push Crashlytics. Verified Firebase CLI 14.17.0 exposes only crashlytics:symbols:upload -mappingfile:* (NO issue/non-fatal read). b CLI absent. Crashlytics dashboard read requires console or a BigQuery export not configured. Fallback: in-repo \$6.AC telem + known crash tickets; operator to paste console items for full triage. \$11.4.6 hone record.
LVA-087	Bug	In progress	P2	QA video frames 0007/0010/0015 vs 0020-0030. NEW. CODE-FIX in 1076 (#6 count bound to real descriptor list). Pending \$6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #6.
LVA-088	Bug	In progress	P2	QA video frames 0012/0015. 1076 investigation: NOT a \$6.R hardcoding violation (config-driven preset). ‘On this network’ label for a cloud/remote preset s worth confirming. Pending \$6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #7.
LVA-089	Bug	In progress	P2	QA video frames 0012/0015. NEW UX. CODE-FIX in 1076 (discovered-API friendly nam Pending \$6.Z verification. Source: .lava-ci-

ATM ID	Type	Status	Severity	Description
LVA-090	Bug	In progress	P3	evidence/video-analysis/2026-06-25-lava-issues-video.md #8. QA video frames 0020-0025. NEW UX, contributes to #1. CODE-FIX in 1076 (#9 select-all handling). Pending §6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #9.
LVA-091	Bug	Queued	P3	QA video frames 0001/0005: single Lava i launched; co-mingling NOT visually confirmed. Needs on-device package check (applicationIdSuffix .dev + launcher label OPEN/UNCONFIRMED. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #10.
LVA-095	Bug	Queued	P1	OnboardingViewModelDynamicProviders' > 'selecting a keyless on-device API reads persists the local api key for search auth' FAILS: AssertionError - the local api-app MUST be read + persisted onto the keyless mDNS-selected endpoint (was GoApi(host=localhost.localdomain, port=42873, platform=null, storage=null, key=null)). Discovered 2026-08-12 while running the combined test suite after merging 4 parallel LVA-085/086/087/093/094 fixes confirmed genuinely pre-existing and unrelated to any of those 4 changes (git log shows the test file's last touch was commit b3cb6de2, predating this session; none of 4 merged branches touch onboarding/api-mDNS code per git diff -name-only). Not root-caused - source: real gradle test run, feature/onboarding/build/test-results/testDebugUnitTest/.
LVA-3	Task	In progress	P1	Pin 208e2c8 is 53 commits behind origin/883ccc1. Highest-impact new clauses: §11.4.93/95/106 (workable-items SQLite I tracked in git + md to DB sync engine), §11.4.79 (own-org submodules in CodeGr §11.4.85 (stress/chaos), §11.4.98, §11.4.10 Pin-bump is operator-gated; decision owe §6.AD.3 Path B vs SQLite DB. Source: self-discovered — .lava-ci-evidence/constitution-review/2026-05-31-68th-cycle-review.md
LVA-5	Bug	Operator-blocked	P0	67th-cycle: the LAVA_FIREBASE_TOKEN default-expansion printed the token to the session transcript (NOT committed to git) Operator MUST rotate per §6.H clause 6
