ATM ID	Type	Status	Severity	Description
LVA-008	Bug	Operator-blocked	P1	Challenge11ArchiveOrgAnonymousSearch crashes the app PROCESS at activity-dest IllegalStateException 'State must be at le CREATED to be moved to DESTROYED' o the inner search/search_input entry. Root caused (2026-06-08): the inner nested NavController's host is the outer addNestedNavigation NavBackStackEntry driven to DESTROYED out from under the inner controller while search_input is still INITIALIZED. FALSIFIED on device: nav 2.9.1->2.9.8, LenientTeardownRule (uncatchable process death), atomic popU replace. Feature WORKS (result row rend pre-teardown). Candidate fixes ranked in incident JSON (inner NavHost Activity-sc LifecycleOwner; move search to outer NavHost; ON_STOP pop). Forensics: .lava evidence/sixth-law-incidents/2026-06-08-navbackstackentry-teardown-crash-2.9.1-incomplete.json

ATM ID	Type	Status	Severity	Description
LVA-019	Task	Queued	—	Task P1 process: coverage ledger has par gap overlap and lacks per-release ledger snapshots. Normalize the registry and add release-attestation ledgers.
LVA-079	Bug	In progress	P1	QA video 2026-06-25 (frames 0040 vs 0060125): input chip bar and results filter chip show different provider sets, and the results chip set CHANGES between two identical queries. 1076 fixed the INPUT chips (observeAll filtered+sorted) but the input RESULTS divergence + run-to-run instability is distinct and still open. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md issue #3.
LVA-082	Task	Queued	P3	Operator asked to use Firebase CLI to push Crashlytics. Verified Firebase CLI 14.17.0 exposes only crashlytics:symbols:upload -mappingfile:* (NO issue/non-fatal read). b CLI absent. Crashlytics dashboard read requires console or a BigQuery export not configured. Fallback: in-repo §6.AC telem + known crash tickets; operator to paste console items for full triage. §11.4.6 hone record.
LVA-088	Bug	In progress	P2	QA video frames 0012/0015. 1076 investigation: NOT a §6.R hardcoding violation (config-driven preset). ‘On this network’ label for a cloud/remote preset s worth confirming. Pending §6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #7.
LVA-089	Bug	In progress	P2	QA video frames 0012/0015. NEW UX. CC FIX in 1076 (discovered-API friendly nam Pending §6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #8.
LVA-091	Bug	Queued	P3	QA video frames 0001/0005: single Lava i launched; co-mingling NOT visually confirmed. Needs on-device package check (applicationIdSuffix .dev + launcher label OPEN/UNCONFIRMED. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #10.
LVA-095	Bug	Queued	P1	OnboardingViewModelDynamicProviders' > ‘selecting a keyless on-device API reads persists the local api key for search auth’ FAILS: AssertionError - the local api-app

ATM ID	Type	Status	Severity	Description
LVA-5	Bug	Operator-blocked	P0	MUST be read + persisted onto the keyle mDNS-selected endpoint (was GoApi(host=localhost.localdomain, port=42873, platform=null, storage=null, key=null)). Discovered 2026-08-12 while running the combined test suite after merging 4 parallel LVA-085/086/087/093/094 fixes confirmed genuinely pre-existing and unrelated to any of those 4 changes (git log shows the test file's last touch was commit b3cb6de2, predating this session; none of the 4 merged branches touch onboarding/api-mDNS code per git diff --name-only). Not root-caused - source: real gradle test run, feature/onboarding/build/test-results/testDebugUnitTest/. 67th-cycle: the LAVA_FIREBASE_TOKEN default-expansion printed the token to the session transcript (NOT committed to git). Operator MUST rotate per §6.H clause 6 (firebase logout; firebase login:ci). Source self-discovered — .lava-ci-evidence/sixth-l incidents/2026-05-20-firebase-token-echo-leak.json
