LVA-008	Bug	In progress	P1	Challenge11ArchiveOrgAnonymousSearch app PROCESS at activity-destroy: IllegalS must be at least CREATED to be moved to the inner search/search_input entry. Root (2026-06-08): the inner nested NavControl outer addNestedNavigation NavBackStack DESTROYED out from under the inner co search_input is still INITIALIZED. FALSIF 2.9.1->2.9.8, LenientTeardownRule (unca death), atomic popUpTo replace. Feature renders pre-teardown). Candidate fixes ra JSON (inner NavHost Activity-scoped Life search to outer NavHost; ON_STOP pop). evidence/sixth-law-incidents/2026-06-08-r teardown-crash-2.9.1-incomplete.json
LVA-019	Task	Queued	—	Task P1 process: coverage ledger has par lacks per-release ledger snapshots. Norm and add release-attestation ledgers.
LVA-079	Bug	In progress	P1	QA video 2026-06-25 (frames 0040 vs 006 chip bar and results filter chips show diffe

ATM ID	Type	Status	Severity	Description
				and the results chip set CHANGES between queries. 1076 fixed the INPUT chips (observed+filtered+sorted) but the input-vs-RESULT to-run instability is distinct and still open. evidence/video-analysis/2026-06-25-lava-issues-video.md #3.
LVA-081	Task	In progress	P2	Operator directive: fetch+pull+merge latest all submodules. Frozen-by-default overridden. Must build-verify after each bump; revert submodules whose bump breaks the build.
LVA-082	Task	Queued	P3	Operator asked to use Firebase CLI to push. Verified Firebase CLI 14.17.0 exposes only crashlytics:symbols:upload + mappingfile (fatal read). bq CLI absent. Crashlytics dashboard requires console or a BigQuery export not available. Fallback: in-repo \$6.AC telemetry + known operator to paste console items for full triage record.
LVA-085	Bug	In progress	P1	QA video frames 0060/0125/0130: results internal provider key not displayName. K60th displayLabel). CODE-FIX in 1076 (from Pending \$6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #4.
LVA-086	Bug	In progress	P1	QA video frames 0060-0110: pure blank ~ skeleton/no-results; 'prince' stays blank with CODE-FIX in 1076 (loading/empty state broken). \$6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #5.
LVA-087	Bug	In progress	P2	QA video frames 0007/0010/0015 vs 0020/0015. FIX in 1076 (#6 count bound to real description). \$6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #6.
LVA-088	Bug	In progress	P2	QA video frames 0012/0015. 1076 investigation of hardcoded violation (config-driven preset label for a cloud/remote preset still worth investigating). \$6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #7.
LVA-089	Bug	In progress	P2	QA video frames 0012/0015. NEW UX. CO (discovered-API friendly name). Pending \$6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #8.
LVA-090	Bug	In progress	P3	QA video frames 0020-0025. NEW UX, code review. CODE-FIX in 1076 (#9 select-all handling). \$6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #9.
LVA-091	Bug	Queued	P3	

ATM ID	Type	Status	Severity	Description
				QA video frames 0001/0005: single Lava i mingling NOT visually confirmed. Needs c check (applicationIdSuffix .dev + launch UNCONFIRMED. Source: .lava-ci-evidenc 2026-06-25-lava-issues-video.md #10. app/src/main/kotlin/digital/vasic/lava/client/LavaApplication.kt:95-105 launches RepopulateProvidersOnStartupUseCase.r fire-and-forget on Dispatchers.Default ins Application.onCreate() - it is not awaited. digital/vasic/lava/client/MainActivity.kt:10 splash screen ONLY on local prefs (theme loading and has no dependency on repopu completion. Consequently the splash can can reach the search screen while the net inside core/domain/src/main/kotlin/lava/d RepopulateProvidersOnStartupUseCase.k flight. If the user searches during that win id the catalogue vends that overlaps a BU provider id (rutracker/rutor/nmclub/kinco gutenbergl - see core/tracker/client/src/m tracker/client/di/TrackerClientModule.kt: the direct-to-site bundled client for that o the user's configured API endpoint. Once all later searches in that session are corre is a real, narrow-window, self-healing defe break. No existing test covers this exact r RepopulateProvidersOnStartupUseCaseTe use case in isolation and does not measur Application.onCreate-to-first-interactive-s window. CONFIRMED by static source-re (2026-08-10/11), part of the LVA-083/084 investigation that also found the Onboard skips-populateFrom test bug in Challenge Real-world frequency and user-visible imp UNCONFIRMED without device instrume test was executed for this specific finding reading. Closure needs either (a) a device Test that measures or deliberately forces correct provider resolution once repopula (b) a product decision to gate the splash s on repopulation completion (with a timeo instead of racing it. RepopulateProvidersOnStartupUseCase's provider-catalogue fetch attempt fails sile RepopulateProvidersOnStartupUseCase.k with no user-visible notice (unlike onboar failure path, which surfaces a PROVIDER_CATALOG_FALLBACK_NOTIC

				other production code path re-invokes popu for the rest of that process's lifetime. Confirmed: production call sites for populateFrom are in OnboardingViewModel.kt:950-998 (onboarding startup use case (app cold start) - there is no and no connectivity-change listener that monitors a transient failure at exact boot time (network associated, VPN/Wi-Fi still connecting, mobile unreachable LAN lava-api-go/api-app endpoint) who configured a non-bundled API endpoint for onboarding silently falls back to bundled/clients for the ENTIRE app session, with nothing degraded, until the process restarts (attempt) or the user re-runs onboarding. This is documented as the finding only and not yet mitigated either add a retry affordance / silent backoff, or at minimum record a non-fatal error in this project's own section 6.AC Comprehensive Telemetry Mandate so the failure is visible instead of invisible. CONFIRMED by static analysis session (2026-08-10/11), same investigation as cold-start race finding LVA-093. Real-world user-visible impact are UNCONFIRMED via instrumentation - no build or test was executed for this specific finding, only source reading. Pin 208e2c8 is 53 commits behind origin/develop. Highest-impact new clauses: §11.4.93/95/96, §11.4.97, §11.4.98, §11.4.102. Pin-bump is operator error owed on §6.AD.3 Path B vs SQLite DB. Source: self-discovered — .lava-ci-evidence/constitution/2026-05-31-68th-cycle-review.md 67th-cycle: the LAVA_FIREBASE_TOKEN was printed to the session transcript (see evidence in git). Operator MUST rotate per §6.H clause (firebase login:ci). Source: self-discovered via sixth-law-incidents/2026-05-20-firebase-to
