

# Product Known-Issues + Field-State Audit — 2026-06-14

|          |                                                                                |
|----------|--------------------------------------------------------------------------------|
| Revision | 1                                                                              |
| Created  | 2026-06-14                                                                     |
| Author   | claude-opus-4-8 (READ-ONLY audit subagent)                                     |
| HEAD     | 357f867 release(1.3.9/0.2.9)                                                   |
| Mirrors  | GitHub + GitLab both at 357f867 (CONVERGED)                                    |
| Method   | Crashlytics MCP (crashlytics_get_report), incident JSONs, doc grep, git status |

This is an evidence-cited audit of the broader PRODUCT known-issues / field state / open incidents / doc-sync gaps so the master plan can address them. Per §11.4.6: every row is fact-with-evidence or explicitly marked UNCONFIRMED.

## Prioritized known-issues table

| # | Issue                                                                    | Status                           | Severity               | Source-of-truth (evidence)                                                                                   |

## Field-state summary (Crashlytics)

- **MCP available + authenticated** — `crashlytics_get_report` returned live data.
- The `appId 1:815513478335:android:456475e2ef4039d8cfd20a` is a **single combined Crashlytics app** receiving BOTH client (1.3.x) AND `api-app (0.2.x / digital.vasic.lava.api)` events. The `.api (d57b960e...)` and `.api.dev (2932451e...)` `appIds` returned **no results** (empty) — telemetry routes to the combined app.
- **Shipped builds 1.3.9-1066 / 0.2.9-14 (and 1067/15) have ZERO field events** in the last 7 days — newest field versions are **client 1.3.5-1062** and **api-app 0.2.6-10**. The shipped fixes have NOT yet been exercised by field users. **No OPEN crash is attributed to the shipped versions** — all OPEN issues are on older versions ( $\leq 1.3.5$  /  $\leq 0.2.6$ ).
- The 2 FGS FATALs (#4) are the only FATAL issues; both stale at 0.2.6.

## §6.H credential state (OWED operator actions)

| Leak                                                                         | Committed?                                                               | Rotated?                          | Owed                                                                                                             |
|------------------------------------------------------------------------------|--------------------------------------------------------------------------|-----------------------------------|------------------------------------------------------------------------------------------------------------------|
| RuTracker<br>nobody85perfect/<br>ironman1985<br>(+RuTor/Kinozal/<br>NNMClub) | Was in git<br>history;<br>redacted<br>d7d4572a;<br>working tree<br>clean | <b>NO —<br/>rotation<br/>OWED</b> | Operator:<br>rotate<br>passwords<br>(§6.H cl.6).<br>Optional:<br>history purge<br>+ force-push<br>(§6.T.3 auth). |
| Firebase CI<br>token echo (67th<br>cycle)                                    | Never<br>committed<br>(transcript-<br>only)                              | <b>YES —<br/>RESOLVED</b>         | None<br>(operator<br>rotated in<br>68th cycle).                                                                  |

## Doc-sync / §6.S state

- `docs/CONTINUATION.md §0` **Last updated: 2026-06-14** — **CURRENT** with HEAD (357f867, 2026-06-14). Compliant.
- `CHANGELOG.md` has entries for the distributed 1.3.9-1066 + 0.2.9-14. The §6.Y post-distribute bump to 1067 / 15 correctly has **no** `CHANGELOG` entry (bump-first, nothing published at 1067/15 yet) — §6.Y/§6.P compliant.
- No `CLAUDE.md` ↔ `AGENTS.md` ↔ `QWEN.md` drift surfaced in this pass (not exhaustively diffed — UNCONFIRMED beyond §0/CHANGELOG).

## Working-tree noise (git status — 18 entries)

| Path                                                                            | Kind                                       | Recommendation                                                                                                    |
|---------------------------------------------------------------------------------|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| core/apiengine/src/main/resources/api-source.hash                               | 1-line regen drift (M)                     | Commit with next build or git checkout if spurious                                                                |
| submodules/tracker_sdk                                                          | submodule pointer moved (M)                | Decide: intended pin bump (commit) vs accidental (reset) — pins are frozen by default per Decoupled-Reusable-Arch |

| .lava-ci-evidence/search-verification/2026-06-14-results-screen.png (untracked) | search-fix proof screenshot                | Curated evidence — may commit                                                                                     |

## Top operator-owed actions (for the master plan)

1. **DECIDE LVA-008** (#1) — accept-with-§6.AC-telemetry + distribute, OR file androidx repro. This is the single CRITICAL gate blocker.
2. **ROTATE RuTracker (+RuTor/Kinozal/NNMClub) credentials** (#2) — standing §6.H clause-6 obligation, still OWED.
3. **RE-RECORD issue3 search-results video on 1.3.9-1066 + DELIVER all 4 to ~/Downloads** (#3) — search now works; the deliverable is producible and still undelivered.

4. **Field-confirm + console close-mark the 2 FGS FATALs + the 401 NON\_FATAL** (#4/#5) once 0.2.9/1.3.9 reach the field (no events yet).
