

Search / api-app / Provider Residuals Audit (2026-06-14)

Scope: residual, unverified, and OWED items around search, onboarding, the api-app, and providers AFTER the 5-layer search fix shipped (client 1.3.9-1066 + api-app 0.2.9-14). Read-only audit; evidence-cited per §11.4.6 (no guessing — claims are anchored to source or marked UNVERIFIED / OWED).

Headline (the question the master plan must answer): On-device search is **PROVEN** only for **Internet Archive** (archiveorg, AuthType=AuthNone). It is **NOT proven for RuTracker / YTS / Kinozal**. The 5-layer fix is provider-agnostic for the *transport + Lava-Auth key delivery*, but auth-required providers need a **SECOND** credential (the provider login session, delivered via the Auth-Token header) that the dynamic ApiBackedTrackerClient search path **does not attach today**. See Item 1 — it is the largest gap and a likely P0 for "search works for the providers the operator originally reported."

Residuals table

#	Item	Status	Sev	What's needed
1	Auth-provider search: Auth-Token provider credential not attached on dynamic /v1/{provider}/search	OWED + UNVERIFIED on-device	P0	ApiBackedTrackerClient.withAuth the Lava-Auth per-instance key (ApiBackedTrackerClient.kt:80-8 the Auth-Token provider-login he parseCredentials(c) reads Auth- (handlers.go:118, multiprovider. provider the server gets Type:"r → rutracker/kinozal Search runs upstream returns login/empty. the provider login session from flow, (b) attach it as Auth-Token: {provider}:cookie:... on the str ApiBackedTrackerClient search r AUTH_REQUIRED capability + the p for dynamic (RemoteTrackerDescr

#	Item	Status	Sev	What's needed
2	YTS / curated-provider search on-device	UNVERIFIED	P1	YTS is a curated provider (no a applies, but it was never run on — only archiveorg was. Confirm descriptor for YTS declares SEARCH yts/search, and renders rows.
3	Existing-install key-restore: api-app uninstalled	OWED	P1	ApiKeyClient.read() returns null provider is absent (ApiKeyClient keyless endpoint → /v1 ops 401 The L3 cold-start restore (21031 mDNS endpoint only when the readable; an uninstalled api-app keyless state with no user-visible
4	Remote (non-local) LAN api-app: local ApiKeyClient key is wrong for a remote endpoint	OWED + UNVERIFIED	P1	withLocalApiKeyIfMissing (OnboardingViewModel:382, no per codegraph) reads the LOCAL app key. For a remote/LAN api-app different device's api-app), the authenticate the remote endpoint restore + onboarding key-attach active GoApi is the co-installed
5	READ_API_KEY permission name variant-suffix (L4)	OWED (MEDIUM / QA-fidelity)	P2	Per docs/issues/2026-06-14-read variant-analysis.md §2c: the per fixed literal in both manifests (a AndroidManifest.xml:11-13,93; ap AndroidManifest.xml:9) while eve id is variant-suffixed. Mixed del install → INSTALL_FAILED_DUPLICA grant denied (test-VM artifact). matched-pair is SAFE (§2a/d). F a \${apiKeyPermission} manifest p variant value + BuildConfig (§6
6	Dead /v1/search SSE — server-side aggregator	CLOSED (consumer removed) / OPTIONAL feature	P2	The dead observeSseSearch → /v1 was removed (addaacd0); no bac search. The Go server DOES have MultiSearchHandler SSE aggrega GetMultiSearch), but the client u streamMultiSearch fan-out, which server-side aggregator is an eff optimization, not a correctness

#	Item	Status	Sev	What's needed
7	Watchable issue-videos re-record (operator task #24)	OWED	P1	Prior 4 "success videos" FAILED recording-analyzer liveness (issue4=1.7s, issue1/2 frozen) — recordings finish <1s then idle. could NOT be recorded because broken; now search works, so search e2e walkthrough + the moved to ~/Downloads. Evidence: video-analysis/2026-06-14-issue Telemetry exists on the client API paths (logcat-only Log.w, NOT recordWarning → not in Crashlytics ApiKeyClient.kt:48,63,69). The ApiKeyProvider.query() empty-cursor (ApiKeyProvider.kt:101-107) record when it serves an empty cursor (defect surface). The Go multi-surface error is no-telemetry by design (surface). Gap: the client key-rec route through AnalyticsTracker. just logcat) so a field recurrence endpoint 401 is visible in Crashlytics empty-cursor should record a new addaacd0 dropped the ignored api authority param + the dead SS MainActivity.buildApiKeyReader client.read()?.key } (no authority meta-lesson in the root-cause d remaining call sites pass an authority silently ignored, and that the currentEndpointIsGoApi removal branch.
8	§6.AC telemetry coverage gap on the key/search error paths	OWED (PARTIAL)	P2	
9	apiKeyReader no-arg refactor ripple + currentEndpointIsGoApi removal	DONE (verify clean)	P2	The withFakes seam (ApiKeyProvider bypassed the real onCreate→holder the L5 bug lived (root-cause do holder regression test (running_engine_exposes_real_key engine_not_running_exposes_empty appear in codegraph) must drive ordering, no withFakes. Confirm falsifiability-rehearsed (caching lazy-version PASSES).
10	L5 real-holder regression test (retire the withFakes bluff)	OWED	P1
