

scripts/check-non-fatal-coverage.sh — User Guide

Last verified: 2026-05-15 (1.2.23 closure-cycle, §6.AC-debt task #61 backfill) **Inheritance:** HelixConstitution §11.4.18 (script documentation mandate)

Overview

Stub doc generated from the script's in-source header comment. See scripts/check-non-fatal-coverage.sh for canonical behavior. This stub exists so the CM-SCRIPT-DOCS-SYNC pre-push gate (.github/hooks/pre-push Check 9) starts gating modifications to this script.

The script's own header documentation (verbatim):

scripts/check-non-fatal-coverage.sh — §6.AC mechanical enforcement.

Scans Kotlin + Go production code for catch blocks (or fallback paths) that lack a recordNonFatal/recordWarning call AND lack an explicit ``// no-telemetry: <reason>`` opt-out comment. Closes §6.AC-debt.

§6.AC Comprehensive Non-Fatal Telemetry Mandate (added 2026-05-14, 28th

§6.L invocation): every catch / error / fallback / unexpected-state path

on every distributable artifact MUST record a non-fatal telemetry event

OR explicitly opt out via ``// no-telemetry: <reason>``.

This is a bash-based scanner (lightweight; pre-Detekt). Detekt rule

remains an open option for §6.AC-debt closure cycle 2.

Scope:

- .kt files under app/src/main, core/*/src/main, feature/*/src/main
- .go files under lava-api-go/internal, lava-api-go/cmd

Excluded:

- test sources (*Test.kt, *_test.go) – tests use catches for assertions, not for telemetry
- generated code (build/, generated/)
- constitution submodule
- HelixConstitution-domain submodules (per §6.AD inheritance – they self-enforce)

Detection:

- Kotlin: every ``}` catch (``` block whose body lacks ``recordNonFatal``, ``recordWarning``, OR ``// no-telemetry:`` (within 5 lines of the catch)
- Go: every ``if err != nil {`` block, every ``defer recover() {`` block
(heuristic; subset of paths but better than nothing)

Acceptance: gate runs as advisory until all violations are addressed.

Once the violations queue is drained, this script can be promoted to pre-push enforcement. Set `LAVA_NONFATAL_STRICT=1` to fail on any violation; default behavior is WARN-only.

Usage

See the script's in-source comment block (above) for canonical usage examples.

Maintenance

When this script is modified, update this document in the same commit (CM-SCRIPT-DOCS-SYNC requires it). Per §11.4.18, the documentation MUST stay in sync with the codebase — no doc may be out of sync with its script.
