

scripts/run-emulator-tests.sh — User Guide

Last verified: 2026-05-15 (1.2.23 closure-cycle, §6.AD-debt task #61 backfill) **Inheritance:** HelixConstitution §11.4.18 (script documentation mandate)

Overview

Stub doc generated from the script's in-source header comment. See `scripts/run-emulator-tests.sh` for canonical behavior. This stub exists so the CM-SCRIPT-DOCS-SYNC pre-push gate (`.github/pre-push Check 9`) starts gating modifications to this script.

The script's own header documentation (verbatim):

```
scripts/run-emulator-tests.sh – Lava-side thin glue around the
Containers submodule's cmd/emulator-matrix CLI (Phase 3.2 of the
2026-05-04 pending-completion plan; closes the constitutional 6.K-
debt
entry in CLAUDE.md).
```

Per clauses 6.I (Multi-Emulator Container Matrix) + 6.K (Builds-Inside-Containers Mandate) + the Decoupled Reusable Architecture rule: the matrix-orchestration capability lives in ``vasic-digital/Containers/pkg/emulator/``. This script:

1. Builds the `cmd/emulator-matrix` binary from the pinned submodule
`(./submodules/containers)`.
2. Builds the Lava debug APK if requested.
3. Invokes the binary with Lava-specific arguments: AVD list, test
class, evidence directory.

All matrix logic – boot, install, run, teardown, attestation file writing – is owned by the Containers submodule. New AVD form factors, QEMU support, and other-OS emulators are extension points there, NOT here.

Usage:

```
./scripts/run-emulator-tests.sh \
  [--test-class
lava.app.challenges.Challenge01AppLaunchAndTrackerSelectionTest] \
  [--avds
CZ_API28_Phone:28:phone,CZ_API30_Phone:30:phone,CZ_API34_Phone:34:phone] \
  [--evidence-dir .lava-ci-evidence/2026-05-04-matrix] \
  [--image-manifest tools/lava-containers/vm-images.json] \
  [--no-build]
```

Environment:

ANDROID_SDK_ROOT or ANDROID_HOME — points to the Android SDK

Exit codes:

- 0 matrix passed (every AVD booted, every test passed)
- 1 matrix failed (at least one AVD failed)
- 2 configuration error (missing flags, missing SDK, etc.)

Usage

See the script's in-source comment block (above) for canonical usage examples.

Maintenance

When this script is modified, update this document in the same commit (CM-SCRIPT-DOCS-SYNC requires it). Per §11.4.18, the documentation MUST stay in sync with the codebase — no doc may be out of sync with its script.
