2	P2	Fixed (→ Fixed.md)	Bug	—	LVA-010 — internal/router/router registers the /v1/:provider route without the provider-resolution middleware so those handlers panic-recover to production instead of resolving a bug. Surfaced by the new router_test.go which asserts resolution (non-404) routes resolve but to a 500, not a provider dispatch. Confirm whether production wires the middleware (real server bootstrap) or this is a bug. Evidence: router_test.go note + internal/router/router.go.
3	P3	Completed (→ Fixed.md)	Task	—	LVA-011 — core/testing TestEndpointsRepository.add() stores Endpoint.Rutrackers and can raise a duplicate-conflict for it, but the real TestEndpointsRepositoryImpl.add() returns for Rutracker (if (endpoint.Endpoint.Rutracker) return) and stores it. A future test asserting 'Rutrackers is a no-op' would pass on fake while exercising different behavior than production — a latent \$ThirdParty fake. Fix: add the Rutracker no-op doc to the fake. Flagged by the Web domain UseCase agent (2026-06-08).
4	P2	Completed (→ Fixed.md)	Task	—	LVA-012 — core/testing TestVisitedRepository, TestFavoritesRepository, TestBookmarksRepository have contains/add/etc methods that are TODO('Not yet implemented') (they are unusable for behavioral wiring) feature ViewModel tests (account rating) work around them with local memory fakes. Per the Third Law, shared fakes should be behaviorally equivalent to the real repos so test them directly. Flagged by the rating VM-test agent (2026-06-09). Fix:

The test 'Show ra request is rendered when conditi met' seeds ZERO engagement + Show, but the REAL use case wo Hide for that user state. 14	—	Fixed (→ Fixed.md)	Bug	—	LVA-023 — internal/rutracker/providerAdapter.Login returned success.UserId (numeric data-uid) AuthToken; the real session cookie is User.Token. Login 'succeeds' but authenticated v1 call (favorites/add comment/download) sends a non-200 value → 401. No e2e login test exists (it shipped).
15	—	Fixed (→ Fixed.md)	Bug	—	LVA-024 — internal/rutracker/providerFromTopicPage wedged the size of a synthetic file entry → topic details shows one nonsense 'Size' file instead of real list. The existing TestFromTopic asserted the bogus file (bluff).
16	—	Fixed (→ Fixed.md)	Bug	—	LVA-025 — internal/handlers/v1 Login has only CaptchaCode (used as the answer) but rutracker needs CaptchaCode=dynamic-field-NAME (cap_code_) + CaptchaValue=answer. The adapter sets both to the answer (which is acknowledged TODO provider.go). Needs LoginOpts + OpenAPI modification (CaptchaValue field) — deferred. Found by parallel Go bug-hunt.
17	—	Implemented (→ Fixed.md)	Task	—	LVA-026 — internal/handlers/v1/captcha serves c.Data(200, image/png, ...). rutracker.FetchCaptcha captures Content-Type, dropped by the adapter. ContentType field on provider.CaptchaImage). Minor (probably decoders sniff). Found by parallel Go bug-hunt.
