LVA-008	Bug	In progress	P1	Challenge11ArchiveOrgAnonymousSearch app PROCESS at activity-destroy: IllegalS must be at least CREATED to be moved to the inner search/search_input entry. Root (2026-06-08): the inner nested NavControl outer addNestedNavigation NavBackStack DESTROYED out from under the inner co search_input is still INITIALIZED. FALSIF 2.9.1->2.9.8, LenientTeardownRule (unca death), atomic popUpTo replace. Feature renders pre-teardown). Candidate fixes ra JSON (inner NavHost Activity-scoped Life search to outer NavHost; ON_STOP pop). evidence/sixth-law-incidents/2026-06-08-r teardown-crash-2.9.1-incomplete.json
LVA-019	Task	Queued	—	Task P1 process: coverage ledger has par lacks per-release ledger snapshots. Norm and add release-attestation ledgers.
LVA-079	Bug	In progress	P1	QA video 2026-06-25 (frames 0040 vs 006 chip bar and results filter chips show diffe

ATM ID	Type	Status	Severity	Description
				and the results chip set CHANGES between queries. 1076 fixed the INPUT chips (observed+filtered+sorted) but the input-vs-RESULT to-run instability is distinct and still open. evidence/video-analysis/2026-06-25-lava-issues-video.md #3.
LVA-081	Task	In progress	P2	Operator directive: fetch+pull+merge latest all submodules. Frozen-by-default overridden. Must build-verify after each bump; revert submodules whose bump breaks the build.
LVA-082	Task	Queued	P3	Operator asked to use Firebase CLI to push. Verified Firebase CLI 14.17.0 exposes only crashlytics upload + mappingfile:* (NO read). bq CLI absent. Crashlytics dashboard console or a BigQuery export not configured. §6.AC telemetry + known crash tickets; or console items for full triage. §11.4.6 honeypot
LVA-085	Bug	In progress	P1	QA video frames 0060/0125/0130: results internal provider key not displayName. K60th displayLabel). CODE-FIX in 1076 (from Pending §6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #4.
LVA-086	Bug	In progress	P1	QA video frames 0060-0110: pure blank ~ skeleton/no-results; 'prince' stays blank with CODE-FIX in 1076 (loading/empty state broken). §6.Z verification. Source: .lava-ci-evidence/2026-06-25-lava-issues-video.md #5.
LVA-087	Bug	In progress	P2	QA video frames 0007/0010/0015 vs 0020/0015. CODE-FIX in 1076 (#6 count bound to real description). §6.Z verification. Source: .lava-ci-evidence/2026-06-25-lava-issues-video.md #6.
LVA-088	Bug	In progress	P2	QA video frames 0012/0015. 1076 investigation of hardcoding violation (config-driven preset label for a cloud/remote preset still worthwhile). §6.Z verification. Source: .lava-ci-evidence/2026-06-25-lava-issues-video.md #7.
LVA-089	Bug	In progress	P2	QA video frames 0012/0015. NEW UX. CODE-FIX (discovered-API friendly name). Pending §6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #8.
LVA-090	Bug	In progress	P3	QA video frames 0020-0025. NEW UX, CODE-FIX in 1076 (#9 select-all handling). Pending §6.Z verification. Source: .lava-ci-evidence/video-analysis/2026-06-25-lava-issues-video.md #9.
LVA-091	Bug	Queued	P3	QA video frames 0001/0005: single Lava issue mingling NOT visually confirmed. Needs confirmation

ATM ID	Type	Status	Severity	Description
				check (applicationIdSuffix .dev + launcher) UNCONFIRMED. Source: .lava-ci-evidence/2026-06-25-lava-issues-video.md #10. app/src/main/kotlin/digital/vasic/lava/client/LavaApplication.kt:95-105 launches RepopulateProvidersOnStartupUseCase.run() fire-and-forget on Dispatchers.Default inside Application.onCreate() -- it is not awaited. digital/vasic/lava/client/MainActivity.kt:100 splash screen ONLY on local prefs (theme loading and has no dependency on repopulation completion. Consequently the splash can reach the search screen while the network is inside core/domain/src/main/kotlin/lava/domain/RepopulateProvidersOnStartupUseCase.kt in flight. If the user searches during that window id the catalogue vends that overlaps a BU provider id (rutracker/rutor/nmclub/kindergarten -- see core/tracker/client/src/main/kotlin/tracker/client/di/TrackerClientModule.kt:100 the direct-to-site bundled client for that on the user's configured API endpoint. Once the first search is returned all later searches in that session are correct. This is a real, narrow-window, self-healing defect. No existing test covers this exact race. RepopulateProvidersOnStartupUseCaseTest() does not use case in isolation and does not measure time from Application.onCreate-to-first-interactive-search. CONFIRMED by static source-review (2026-08-10/11), part of the LVA-083/084 investigation that also found the OnboardActivity skips-populateFrom test bug in ChallengeMode. Real-world frequency and user-visible impact UNCONFIRMED without device instrumentation. The test was executed for this specific finding and did not show a reading. Closure needs either (a) a device test that measures or deliberately forces a race to correct provider resolution once repopulation is complete (b) a product decision to gate the splash screen on repopulation completion (with a timeout) instead of racing it. RepopulateProvidersOnStartupUseCase's provider-catalogue fetch attempt fails silently. RepopulateProvidersOnStartupUseCase.kt:100 with no user-visible notice (unlike onboardActivity failure path, which surfaces a PROVIDER_CATALOG_FALLBACK_NOTIFICATION). This is other production code path re-invokes populating the rest of that process's lifetime. Confirmed:
LVA-093	Bug	Queued	P2	
LVA-094	Bug	Queued	P2	

ATM ID	Type	Status	Severity	Description
				production call sites for populateFrom are OnboardingViewModel.kt:950-998 (onboarding startup use case (app cold start) -- there is no connectivity-change listener that monitors transient failure at exact boot time (network associated, VPN/Wi-Fi still connecting, mobile unreachable LAN lava-api-go/api-app endpoints) who configured a non-bundled API endpoints onboarding silently falls back to bundled/clients for the ENTIRE app session, with nothing degraded, until the process restarts (attempt) or the user re-runs onboarding. This is documented as the finding only and not yet fixed -- either add a retry affordance / silent backoff, or at minimum record a non-fatal finding in this project's own section 6.AC Comprehensive Telemetry Mandate so the failure is visible instead of invisible. CONFIRMED by static analysis session (2026-08-10/11), same investigation as cold-start race finding LVA-093. Real-world user-visible impact are UNCONFIRMED with current instrumentation -- no build or test was executed for this specific finding, only source reading. Pin 208e2c8 is 53 commits behind origin/develop. Highest-impact new clauses: §11.4.93/95/96, §11.4.97, §11.4.98, §11.4.102. Pin-bump is operator-allowed on §6.AD.3 Path B vs SQLite DB. Source: self-discovered — .lava-ci-evidence/constitution/2026-05-31-68th-cycle-review.md 67th-cycle: the LAVA_FIREBASE_TOKEN was printed to the session transcript (see evidence in git). Operator MUST rotate per §6.H clause (firebase login:ci). Source: self-discovered — sixth-law-incidents/2026-05-20-firebase-to
