

Workable-Items Evidence-Path Exemption Ledger

Per the Constitutional §6.D Behavioral Coverage Contract pattern (same precedent as docs/superpowers/specs/2026-04-30-sp3a-coverage-exemptions.md): every gate exemption is listed here individually with reason, investigation method, and date. Blanket waivers are forbidden — scripts/check-workable-items.sh parses the machine-readable block below and rejects the gate on ANY CM-WORKABLE-ITEMS-SYNC violation whose (atm_id, history_id) pair is not listed here verbatim. Adding a row to this file does not fabricate evidence — it is a documented acknowledgment that no honest resolvable-artifact fix exists for that specific closure, with the investigation that proves it.

See also: Seventh Law clause 5 (Recurring Bluff Hunt).

An exemption whose stated reason no longer holds (e.g. the cited deletion commit turns out to have a live successor file, or the workable-items binary later gains a mark-historically-deleted mechanism) MUST be closed by fixing the underlying item_history row via correct-history-evidence and removing its ledger row — never by leaving a stale exemption in place once a real fix becomes possible.

Background

On 2026-06-28, commit 56f2417795c98408ebbb6b62ed4ac029526c5ad8 ("evidence cleanup + submodule pin advances") bulk-deleted the entire .lava-ci-evidence/workable-items/ directory of per-item evidence files that 49 of the 51 LVA-N closures recorded in June 2026 pointed at. A separate, unmerged investigation branch (commit 6a56a394, 2026-08-20) individually triaged all 78 validate violations that existed at the time, fixed 20 of them where the closure narrative embedded a still-existing literal file path (via correct-history-evidence, never a hand-edit of the SQLite file), and left the remaining 58 open with per-item reasoning recorded in a gitignored scratch file. This session (2026-08-20) independently re-derived the same triage against the current DB state — confirming the same root cause for the deleted-evidence class via git log --all --diff-filter=D on every one of the 49 affected paths (not a re-read of the prior branch's notes) — fixed 2 further violations (LVA-013 history ids 202/203, whose narrative already named two still-existing, unambiguous evidence files that only

needed disaggregating into one path per row), and is recording the remaining 67 as an explicit, auditable exemption ledger rather than leaving CM-WORKABLE-ITEMS-SYNC permanently red with no path to a passing gate.

Category A — evidence bulk-deleted by commit 56f2417795c9 (2026-06-28), no live replacement

49 items. Verified by running `git log --all --diff-filter=D --format=%H -- <path>` against every one of the paths below and confirming the deleting commit is exactly 56f2417795c98408ebbb6b62ed4ac029526c5ad8 (script output cross-checked, zero anomalies). The workable-items binary has no subcommand to mark historical evidence "deleted, closure narrative stands" (checked `--help`, `schema.sql`, `evidence.go`, `correct_evidence.go` in `constitution/scripts/workable-items/` — none exists). Inventing a replacement evidence path would be fabrication; leaving the row unexempted would permanently block every future push for a defect in tooling this project doesn't control the pin of on a whim (`constitution/` is frozen-by-default, CONST-049 pipeline).

ATM-ID	History-ID	Event	Date	Evidence path (deleted)
				LVA-4-evidence.md

Category B — malformed path, never existed under either literal form

2 items (same underlying item, LVA-6/LVA-031, recorded on two history rows). Path is `.lava-ci-evidence/workable-items/./codegraph/lva6-groundtruth-20260609.md`. Verified via `git log --all --format=%H` (not `--diff-filter=D`) on BOTH the literal string and its `..-normalized` form `.lava-ci-evidence/codegraph/lva6-groundtruth-20260609.md` — zero commits in either case. This was never a deletion; the path was wrong from the moment it was recorded.

ATM-ID	History-ID	Event	Date	Evidence path (never existed)
LVA-031	62	Fixed	2026-06-09	<code>.lava-ci-evidence/workable-items/./codegraph/lva6-groundtruth-20260609.md</code>
LVA-6	55	Completed	2026-06-09	<code>.lava-ci-evidence/workable-items/./codegraph/lva6-groundtruth-20260609.md</code>

Category C — narrative closure with no unambiguous resolvable file

16 items. The closure narrative names a test class, module, or feature area (e.g. "core/testing TestEndpointsRepository Rutracker no-op + equivalence test") but does not embed one specific, still-existing FILE path with a slash and extension — only bare module/package directories match a path-shaped regex (core/testing, core/domain, feature/rating, feature/favorites, feature/topic, core/preferences, submodules/helixqa). Recording a directory as "evidence" for a specific behavioral fix would be a guess, not proof — indistinguishable from picking one of several plausible files, which the Seventh Law clause 4 forbidden-pattern list and this project's own prior 2026-08-20 triage both declined to do ("picking one would have been a guess, so they were

deliberately left alone"). Left open pending either a richer closure-time evidence discipline going forward, or operator decision to accept a specific file per item.
