ATM ID	Type	Status	Severity	Description
LVA-008	Bug	Operator-blocked	P1	Challenge11ArchiveOrgAnonymousSearch crashes the app PROCESS at activity-dest IllegalStateException 'State must be at le CREATED to be moved to DESTROYED' o the inner search/search_input entry. Root caused (2026-06-08): the inner nested NavController's host is the outer addNestedNavigation NavBackStackEntry driven to DESTROYED out from under the inner controller while search_input is still INITIALIZED. FALSIFIED on device: nav 2.9.1->2.9.8, LenientTeardownRule (uncatchable process death), atomic popU replace. Feature WORKS (result row rend pre-teardown). Candidate fixes ranked in incident JSON (inner NavHost Activity-sc LifecycleOwner; move search to outer NavHost; ON_STOP pop). Forensics: .lava evidence/sixth-law-incidents/2026-06-08-navbackstackentry-teardown-crash-2.9.1-incomplete.json
LVA-120	Bug	Operator-blocked	P0	WHAT (verified verbatim in the real scrip session, line by line, not inferred): scripts

ATM ID	Type	Status	Severity	Description
				firebase-distribute.sh line 56 - “-debug-and-release -both) MODE="both"; shift”. Line - the constitution 6.AA staging gate is guarded on [[“\$MODE” == “release” && -f “\$LAST_VERSION_DEBUG_FILE”]], so in combined mode it NEVER EVALUATES. Lines 322-323 - “case “\$MODE” in release) AK_CHANNEL="release" ;; *) AK_CHANNEL="debug" ;; esac”, so the constitution 6.AK cycle-coverage gate (which also subsumes the 6.Z evidence presence, commit-SHA match and 24h freshness check) is pointed at the DEBUG channel. Lines 444 and 513 - the RELEASE APK is version asserted, resolved and uploaded whenever MODE is release OR both. NET EFFECT: combined distribute ships the R8-minified RELEASE APK while the only device-evidence gate that runs checks DEBUG-channel evidence. That is mechanically the same as the 1.2.19-1039 incident (the constitution 6.Z forensic anchor), in which a release APK crashed on every cold launch because release-variant behaviour was never gated. PRE-EXISTING: this is a property of scripts/firebase-distribute.sh and is NOT introduced by feature 002. REPRODUCTION: tests/firebase/repro_mode_both_channel_gap.sh NEVER executes firebase-distribute.sh (thus would attempt a real Firebase upload); it greps the four real decision lines verbatim, evaluates that extracted logic per MODE, exits 2 if those lines ever stop existing rather than silently testing a stale copy. Its exit semantics are inverted on purpose and documented in its header: 0 means the gate was REPRODUCED (expected today), 1 means it is GONE and the harness should be converted into a proper regression test, 2 means extraction failed and it can say not truthful - exit 2 is never read as “fixed”. REPRODUCED OUTPUT: mode debug - release APK sent no, 6.AK channel debug, 6.AA staging gate no; mode release - release APK sent yes, 6.AK channel release, 6.AA staging gate yes; mode both - release APK sent YES, 6.AK channel DEBUG, 6.AA staging gate NO. The release row is the control that proves this is not a false alarm: -release-c

ATM ID	Type	Status	Severity	Description
LVA-121	Task	Queued	P3	DOES evaluate both gates on the correct channel. The gap is specific to the combined mode - precisely the mode an unattended pipeline would use. IMPACT ON FEATURE 002: task T043 was specified to invoke ex -debug-and-release and would have inherent the hole; any amendment authorizing an unattended combined distribute would authorize exactly this. Source of truth: specs/002-build-test-distribute-pipeline/progress and specs/002-build-test-distribute-pipeline/tasks.md. UNCONFIRMED: this is a HYPOTHESIS, demonstrated defect. It was NOT reproduced during feature 002 and no failing case was constructed. Filed so it is not lost; it must either reproduced (then re-filed as a Bug RED evidence) or explicitly ruled out. CLAs scripts/pipeline/phase-01-build.sh counts ARTIFACT lines rather than distinct labels. five duplicate labels would satisfy the >= PASS condition. WHY IT WAS NOT PROMOTED TO A FINDING: not reachable through the real sub-scripts, each of which prints a given label at most once. To close either construct a real producing path or record the argument that none exists. Source of truth: specs/002-build-test-distribute-pipeline/progress.yml and specs/002-build-test-distribute-pipeline/tasks.md. UNCONFIRMED: this is a HYPOTHESIS, demonstrated defect. It was NOT reproduced during feature 002 and no failing case was constructed. Filed so it is not lost; it must either reproduced (then re-filed as a Bug RED evidence) or explicitly ruled out. CLAs the find ... 2>/dev/null inside recompute_evidence_summary in scripts/pipeline/lib/run-report.sh would report zero Evidence Records for an unreadable phase directory, which finalize_run_report would then treat as zero rejections. WHY IT WAS NOT PROMOTED TO A FINDING: no real producing scenario was constructed. To close either construct one or record why the phase directory cannot become unreadable mid- Source of truth: specs/002-build-test-

ATM ID	Type	Status	Severity	Description
LVA-123	Task	Queued	P3	distribute-pipeline/progress.yml and specs/002-build-test-distribute-pipeline/tasks.md UNCONFIRMED: this is a HYPOTHESIS, not a demonstrated defect. It was NOT reproduced during feature 002 and no failing case was constructed. Filed so it is not lost; it must be either reproduced (then re-filed as a Bug) or ruled out. CLAUDE evidence) or explicitly ruled out. CLAUDE the compose-file port parse in scripts/pipe phase-04-live-verify-api.sh is a no-op when LAVA_API_LISTEN value in docker-compose.yml is unquoted. WHY IT WAS NOT PROMOTED TO A FINDING: the real doc. compose.yml quotes the value, and a wrong port fails closed at curl rather than passing vacuously. To close, either construct a reproducing case or make the parse fail loudly on an unrecognized shape. Source of truth: specs/002-build-test-distribute-pipeline/progress.yml and specs/002-build-test-distribute-pipeline/tasks.md. WHAT: feature 002 task T040 is a CONSTITUTIONAL AMENDMENT, not routine code review. It would amend root CLAUDE.md 6.AA (Two-Stage Distribute Mandate) and the Seventh Law clause 3 (Tag Real-Device Attestation) per research R-001, adding an alternate-path clause under which a Pipeline Run Report for the exact commit SHA and versionCode substitutes human debug-then-release confirmation, scoped narrowly to distributions this pipeline itself produces. It must include a forensic anchor, a migration plan and a version-bug rationale per the constitution own Amendment procedure. BLAST RADIUS: this is a RELAXATION of an existing anti-bluff principle whose forensic anchor is the 1.2.19-1039 cold-start-crash incident. It interacts directly with the open firebase-distribute combined-mode finding filed alongside this item: authorizing an unattended combined distribute would authorize exactly the debug-evidence-gate release-APK gap. Review-ready DRAFT text for this amendment is at specs/002-build-test-distribute-pipeline/constitutional-amendments-proposal.md (with .html and siblings). The draft is NOT applied:
LVA-124	Task	Operator-blocked	P1	

ATM ID	Type	Status	Severity	Description
LVA-125	Task	Operator-blocked	P1	CLAUDE.md and .specify/memory/constitution.md are byte-identical to their feature baselines. BLOCKS: feature 002 p 5 (US3 distribute), specifically task T043. Source of truth: specs/002-build-test-distribute-pipeline/progress.yml and specs/002-build-test-distribute-pipeline/tasks.m WHAT: feature 002 task T041 updates .specify/memory/constitution.md match the T040 amendment with a MAJOR version bump 1.1.0 to 2.0.0, per that file c Versioning policy - MAJOR because this is a RELAXATION of an existing principle, not an addition - and updates the Sync Impact R header accordingly. Paired with T040: nei lands alone. Review-ready DRAFT text for amendment is at specs/002-build-test-distribute-pipeline/constitutional-amendments-proposal.md (with .html and siblings). The draft is NOT applied: CLAUDE.md and .specify/memory/constitution.md are byte-identical to their feature baselines. BLOCKS: feature 002 p 5 (US3 distribute), specifically task T043. Source of truth: specs/002-build-test-distribute-pipeline/progress.yml and specs/002-build-test-distribute-pipeline/tasks.m WHAT: feature 002 task T048 is a CONSTITUTIONAL AMENDMENT to the Decoupled Reusable Architecture rule in CLAUDE.md, carving out this pipeline automated submodule-pin-advance step as explicit, documented exception to “Submodule fetch/pull is an EXPLICIT operator action, never automatic”. BLAST RADIUS: 16-plus submodule upstreams with automatic pin advancement. The wave-5 defect filed alongside this item is the concrete demonstration of why this amendment needs careful scoping: the implementing script defaulted to every submodule and would have auto-advanced the constitution governance submodule itself until a default-deny list was added. Review-ready DRAFT text for this amendment is at specs/002-build-test-distribute-pipeline/constitutional-amendments-proposal.md (with .html and siblings). The draft is NOT applied: CLAUDE.md and .specify/memory/
LVA-126	Task	Operator-blocked	P1	CLAUDE.md and .specify/memory/constitution.md are byte-identical to their feature baselines. BLOCKS: feature 002 p 5 (US3 distribute), specifically task T043. Source of truth: specs/002-build-test-distribute-pipeline/progress.yml and specs/002-build-test-distribute-pipeline/tasks.m WHAT: feature 002 task T048 is a CONSTITUTIONAL AMENDMENT to the Decoupled Reusable Architecture rule in CLAUDE.md, carving out this pipeline automated submodule-pin-advance step as explicit, documented exception to “Submodule fetch/pull is an EXPLICIT operator action, never automatic”. BLAST RADIUS: 16-plus submodule upstreams with automatic pin advancement. The wave-5 defect filed alongside this item is the concrete demonstration of why this amendment needs careful scoping: the implementing script defaulted to every submodule and would have auto-advanced the constitution governance submodule itself until a default-deny list was added. Review-ready DRAFT text for this amendment is at specs/002-build-test-distribute-pipeline/constitutional-amendments-proposal.md (with .html and siblings). The draft is NOT applied: CLAUDE.md and .specify/memory/

ATM ID	Type	Status	Severity	Description
LVA-127	Task	Operator-blocked	P1	constitution.md are byte-identical to their pre-feature baselines. BLOCKS: feature 002 phase 6 (US4 repository closure), specifically task T055. Source of truth: specs/002-build-test-distribute-pipeline/progress.yml and specs/002-build-test-distribute-pipeline/tasks.md. WHAT: feature 002 task T049 updates .specify/memory/constitution.md to match the T048 carve-out - the same MAJOR version bump as T041 if landed together, follow-up MAJOR if landed separately. Ready DRAFT text for this amendment is at specs/002-build-test-distribute-pipeline/constitutional-amendments-proposal.md (with .html and .pdf siblings). The draft is NOT applied: CLAUDE.md and .specify/memory/constitution.md are byte-identical to their pre-feature baselines. BLOCKS: feature 002 phase 6 (US4 repository closure), specifically task T055. Source of truth: specs/002-build-test-distribute-pipeline/progress.yml and specs/002-build-test-distribute-pipeline/tasks.md. WHAT: feature 002 task T054 is a MANDATORY code review of scripts/advance-all-submodules.sh before any invocation against a real submodule upstream, per plan.md Human Checkpoint #2. This is the highest-blast-radius new component in the feature: 16-plus submodule upstreams with automatic pin advancement, plus commit-push of each submodule own local modifications. CURRENT STATE, stated honestly: the T050-T053 TDD cycle against DISPOSABLE FIXTURE repos is COMPLETE. 36/36 assertions green, independently reviewed by the orchestrating session - and real submodules were confirmed untouched (git status -porcelain over submodules/ and constitution/ empty, git diff -cached empty, scripts/advance-all-submodules.sh has NEVER been run against a real submodule or a real upstream. REVIEW MUST COVER at minimum: the GOVERNANCE_DENY default deny list added by the wave-5 fix and the fact it is deliberately not overridable via LAVA_ADVANCE_SUBMODULES; the 7-step ordering from research.md R-005 (fetch, compare, no-op or checkout-advance, reb

ATM ID	Type	Status	Severity	Description
LVA-129	Task	Operator-blocked	P1	and-test, discard-and-report on failure, commit/push the submodule own local modifications, update the parent pin); and refusal paths REJECTED_BREAKING_CHANGE, REJECTED_PUSH_CONFLICT and REFUSED_GOVERNANCE_DENY. Source of truth: specs/002-build-test-distribute-pipeline/progress.yml and specs/002-build-test-distribute-pipeline/tasks.md. WHAT: feature 002 task T062 requires a full end-to-end run of quickstart.md Scenario 1 (all phases, no shortcuts) on a DISPOSABLE branch, per plan.md Human Checkpoint #1 before scripts/pipeline-build-test-distribute-pipeline is trusted to run against real master. CURRENT STATE, stated honestly: the full end-to-end orchestrator run across all five wired phases has NOT been performed. It invokes Gradle, systemd and an Android emulator, and was deliberately not run because it is this review gate and because it would have contended with parallel agents already using those toolchains. It is not claimed as done anywhere. SCOPE NOTE: only phases precondition, build, test, install_boot and live_verify are wired; distribute, docs and closure are deliberately not wired pending T040/T041 and T048/T049 and asking for them via -until is a usage error rather than a silent no-op. Source of truth: specs/002-build-test-distribute-pipeline/progress.yml and specs/002-build-test-distribute-pipeline/tasks.md. 67th-cycle: the LAVA_FIREBASE_TOKEN default-expansion printed the token to the session transcript (NOT committed to git). Operator MUST rotate per §6.H clause 6 (firebase logout; firebase login:ci). Source self-discovered — .lava-ci-evidence/sixth-lava-incidents/2026-05-20-firebase-token-echo-leak.json
